

Hacktoberfest

Sign in with GitHub on Hacktoberfest

Select a very random and specific question from tuktuk
Please clone on local machine eg. Kadane's Algorithm

Open issue on main repo
Also, mention that you wanna work on this issue
Simultaneously "watch repo" for any updates on this issue

Fork the repo to create a copy of it on "remote" i.e. your GitHub Account

Clone the repo to save it as "local" i.e. store repo locally on PC

Open editor. "Create separate branch" to work on issue and put solution of issue

Commit solution branch to "local" repo

Push solution to "remote" repo

Make a pull request and merge this "remote" repo on your account into main repo

If approved, this branch is merged onto "master" branch of main repo
If denied and improvement suggested you gotta rework changes right from changes to your "local" repo
If just denied, your code is just useless
